

KCGM's operation is located 10 minutes from the city of Kalgoorlie-Boulder, which is approximately 600kms east of Perth in Western Australia. The Super Pit produces up to 800,000 ounces per annum and is currently the biggest open pit gold mine in the country. Kalgoorlie is home to over 30,000 permanent residents, which makes it the largest city in outback Australia!

With over 1,100 personnel working on site, KCGM is able to provide numerous employment opportunities and benefits including a competitive salary, full relocation, health insurance allowance, an attractive bonus scheme and more.

We are looking for Leaders who foster a positive, efficient and safe workplace culture that will reflect KCGM's Core Values and Code of Conduct.

Mine Operations Superintendent

Reporting to the Manager - Mining, this key role will see you lead the Drill, Blast, Crusher, Survey and Voids functions.

About the role

- Lead the Drill and Blast Team to ensure compliance with procedures enabling the designing, drilling, charging and firing of Open Pit blasts
- Lead the **Crusher** team activities to ensure adequate maintenance of stocks and the efficient delivery of crushed ore to the processing plant
- Lead the **Survey and Voids** Team to ensure that mine designs, ore zones and hazardous areas are accurately set out, identified and measured
- Oversee the month end process in the areas of pit and stockpile reconciliation
- Manage our business partners in Mine Operations to ensure production targets are achieved
- Prepare and manage the Mine Operations budgets and periodic forecasts

About you

- Previous leadership and open pit experience is advantageous
- Bachelor of Science / Engineering or equivalent

Geotechnical Superintendent

Reporting to the Manager of Mine Technical Services this key role will see you lead the Geotechnical function.

About the role

- Provide leadership to members of the Geotechnical Group
- Review and report regularly on the Geotechnical performance of the operation
- Contribute to mine plans and designs to ensure maximum ore recovery and continued compliance with ground management plans
- Monitor and make recommendations regarding Geotechnical systems, processes and outcomes
- Monitor operational mining activities to ensure compliance with the LOM Geotechnical plan

About you

- Previous years experience in Geotechnical Engineering
- Previous experience in a leadership role
- Geotechnical experience in hard rock and challenging stope environments.
- Bachelor of Science / Engineering or equivalent

Senior Geotechnical Engineer

Supervise the development of structural geological models as well as supporting other company projects that optimise mine designs, this will include:

- Plan and run diamond drilling
- Contribute to other new and exciting Geotechnical projects
- Building and maintaining structural, geological and engineering models
- Providing support to the pit operations by proactively identifying adverse Geotechnical conditions
- LOM Geotechnical open pit designs

About you

- Previous years experience in Geotechnical Engineering (Preferrably in an open pit environment)
- Bachelor of Science / Engineering or equivalent
